

Typical problems with existing houses are as follows:

- Capillary Moisture
- Mould infestation
- Heat losses

Moisture remediation

Damage patterns from practice

We are a company from Bremen, that deals with the unpleasant things about construction:

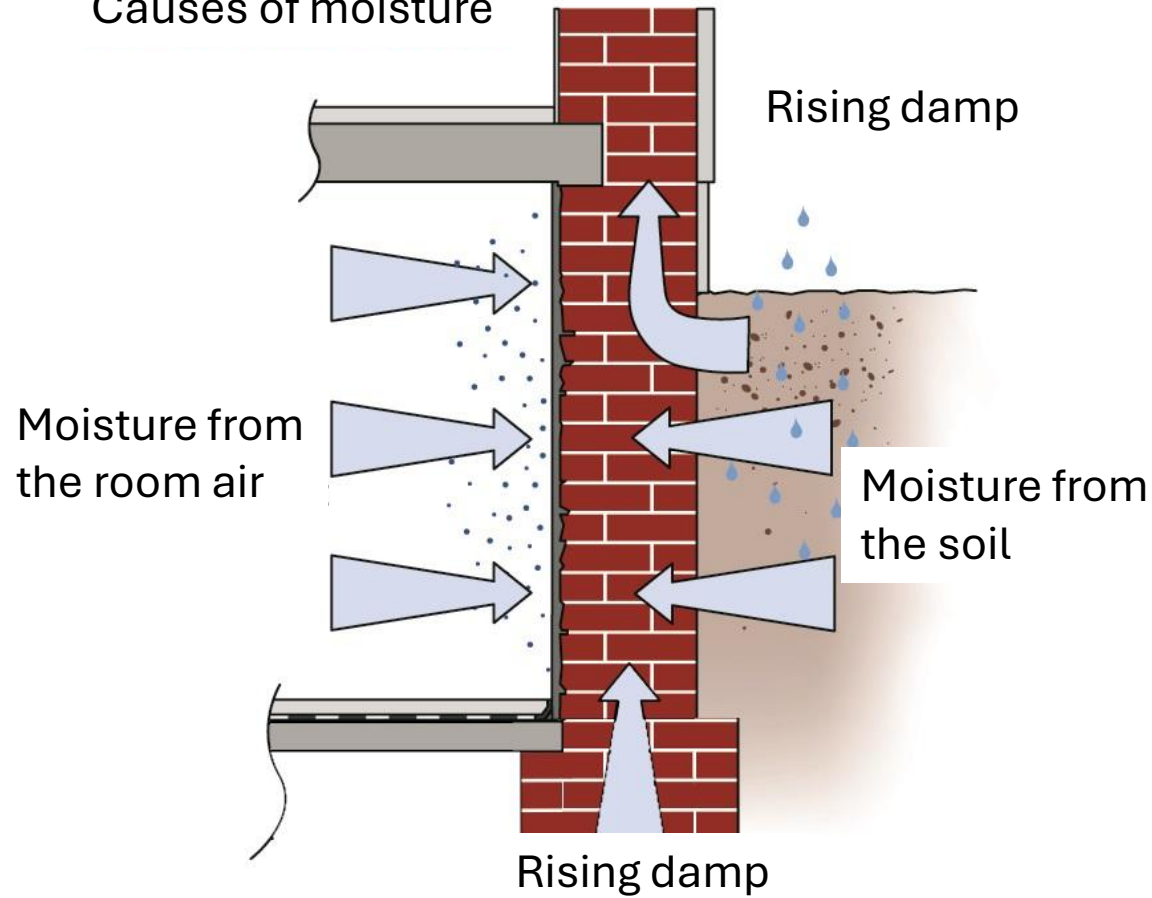

- Mould
- Moisture
- Wet walls

Analysing the causes of moisture

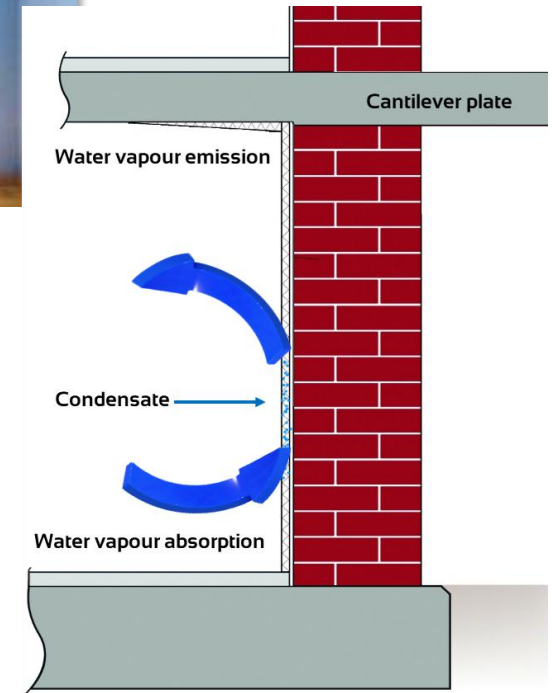

or: Where does the water come from?

Causes of moisture

Solving this is often:

- Cost intensive
- Elaborate
- Not permanent

**Sustainable renovation, creating a healthy room climate –
Innovative products for permanent mould remediation**

The safe interior insulation system and mould prevention system

Triple protection against mould growth:

1. Thermal insulation

Clima Redboard creates warm surfaces without condensation and without high humidity

2. Humidity regulation

The Clima Redboard removes all moisture from the surface and deals with high humidity in the room air

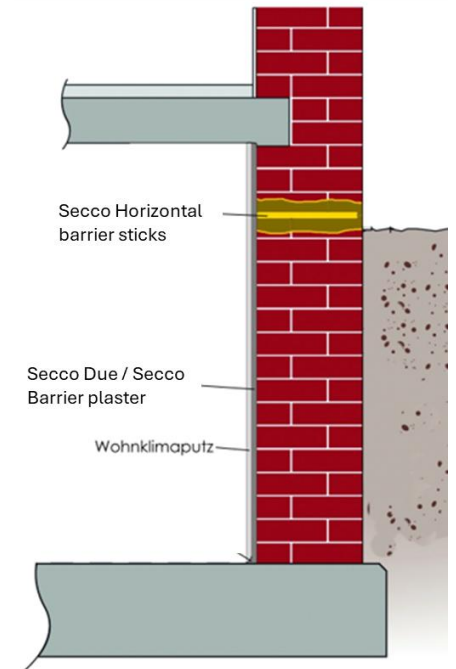

3. Alkaline character

The Clima Redboard has a pH value of 10 ... which the mould doesn't like at all

→ EPD certified, A1 (non-flammable)

System overview of
internal waterproofing

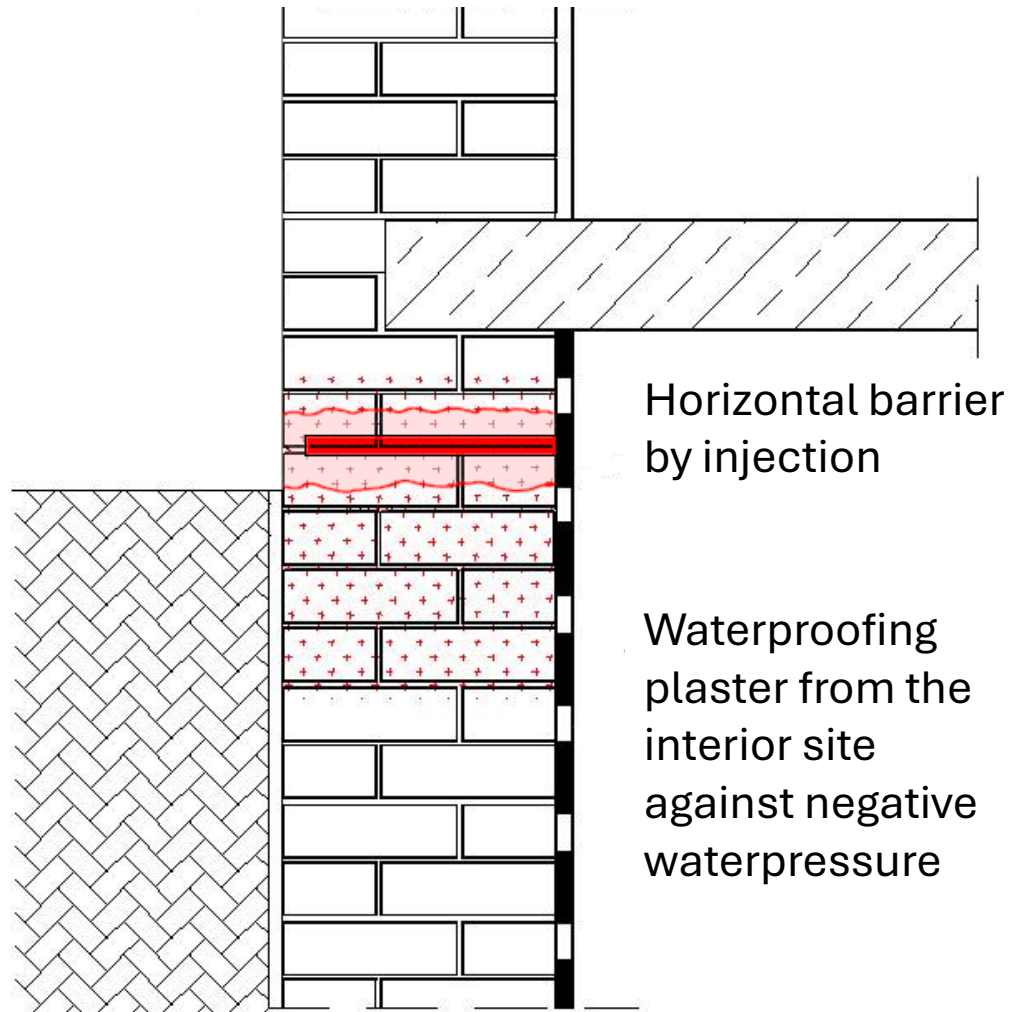

Sustainable renovation, preserving building fabric – Innovative products to combat moisture from the inside

Sealing from the inside of the wall

Complex and destructive external waterproofing is a thing of the past

Horizontal barrier
by injection

Waterproofing
plaster from the
interior site
against negative
waterpressure
